

Please amend claim 16 as follows:

16. (Twice Amended) A method of completing a telephone call comprising:

enabling a telephone user to receive a telephone call on a remote control unit;

enabling the user to control an electronic device using said remote control unit; and

[causing a proximate wireless telephone to generate carrier frequency; and

adopting said frequency as the carrier frequency for communication with said remote control unit]

prompting the user to issue a page from the user's wireless telephone.

Please add the following new claim 26:

26. The method of claim 18 further including detecting the carrier frequency of a proximate wireless telephone and adopting said frequency as a carrier frequency for communications with said remote control unit.

Please cancel claims 1 through 6.

Please amend claim 7 as follows:

7. (Twice Amended) A remote control system for an electronic device comprising:

a first device including a processor and a radio frequency transceiver and an infrared transceiver, said processor arranged to control said infrared and radio frequency transceivers; [and]

a remote control unit including a device to remotely control an electronic device in a telephone unit to
